Given an N*N integer square matrix, rotate it by 90 degrees in anti-clockwise direction.

Try doing it without any extra space.

Note : You just need to change in the given input itself. No need to return or print anything.

Input format :

Line 1 : Integers N

Next N lines : N integers, elements of one row
(separated by space)

Output Format :

Updated matrix

Constraints :

1 ≤ N ≤ 1000

Sample Input :

3
1 2 3
4 5 6
7 8 9

Sample Output :

3	6	9
2	5	8
1	4	7
